

HIGHWAY BRIDGES,
WAYFINDING & DIGITAL
VISUAL GUIDANCE SUPPORTS

SHAFT

The shaft is fabricated from break-formed, sub-arc welded steel plate. Shapes, diameters, heights and spans are defined by shape and dimensions of the wayfinding signage be it analogous with current high reflective wood panels as well as digital messaging, visual guidance communications.

FINISH

The standard finish is hot dipped galvanized, H.D.G. for mild steel structures.

NOTE

Consult the wind map for wind loading in your area.
Typical information provided to us includes geodetic surveys to establish distances required between the uprights.
